Interests
segregation, inequality, polarization, social networks, research methods

Brief summary of my research over the last years
In my research I focus on social divisions between groups; the interplay of segregation, inequality and polarization. My particular areas of interest are the causes and consequences of segregation in neighborhoods, schools and social networks. I am on an ongoing journey to master new research methods and I am always seeking new data opportunities. For me, methodological advancements, unique (natural, big) data and theoretical developments go hand in hand. Insightful data visualization and statistical models deserve equal attention. My publication strategy is aimed at furthering academic, political and public debates.
